Summary: All over our site you will see a new feature of + added all over done in Java and html so here is how to do it on anything with an id

Here is a quick example of how to add folding up page items on any page html together.

demo

+

blah blah blah vanishes

Java Code = Important Part

That is the Java Code this on our site; it was placed in the banner to be

Yet can easily be added in the top of a theme in the head or html document

yet in our case we wanted it on all our theme in one go, with no work on playing around adding it as banner.... We realized that the banner within loads before the rest of the page; so works on all items.

So just adding a blank banner with this code, can add to multiple themes

Java Code = Action Part

Now the + Sign you see everywhere, this will make anything that is called open and close...

For instances...

Examples of ID uses

Plus many others, we have not included TR as it causes a second opening reloaded on opening

.

Each ID must be different and each time you want to make something collapse make a + sign where needed anywhere in the page.

So as you see with what we have done, there is ++++ at the bottom of our across the theme, so the theme folds.

The Blocks that have it, are included in the templates of the blocks and

This could be made more into Xoops as a standard feature and may do what done it.

ID exists already

If you already have ID used in a theme or anything really, just add the A idname for the one being used. This should then make that item fold up.

Blah DEMO Code Example

Just to finish this is all the code added when the JAVA is in place and it with work.
