At one time or another, each of us has had rapturous experience with music and emotion in us. Certain sounds and rhythms induce in us, a trance-like mental world, there are so many genres of music for our choosing, ranging from Jazz, Blues, Electronics, Punk Rock. As there are music that heal, there are music that harm.

Let us first explore the dynamics of music in nature. We might take it for granted that of the birds greeting every new day. If you listen closely, birds use the black and white keys for expression. For example, if a dog cries in A, it wants something, and a mother does the same. A mother will intuitively read her baby's sound, and thus respond.

Zanda, a bird-lover who discovered the birds' melodies, exclaimed, "I discovered music when I first realised that, and it was cool until one of them hit a white key. My friends, he used to chat with them as a kid. He walked for miles and then they warned him not to walk a path by their melody. He always listened, and finally he experiment with the bird's melodic rhythms, get a few people play only on a keyboard. You will get interesting harmonic melodies. (And aren't he right? you just can't go wrong with that!)

And, if you haven't noticed, songs that are primarily on black keys can be very beautiful. Listen to Yanni's End of August for a starter. The Chinese understood this, the guzheng which is a beautiful stringed instrument, has strings of black keys for the distinct flavour of Chinese music. For white keys, you just have to play the black keys are white keys split into half, literally. It is like the transitions, the transitions. So, it is no wonder that when you are primarily playing the transitional keys, you are created. It is not unlike the Tibetan concept of bardo or in-between state. White keys are conscious expression, whereas black keys are of the unconscious.

Sound is crucial for our state of consciousness, a high vibration will speed up and activating dormant parts. The mass humanity uses less than 5% of our brain, the awakened are the likes of intuition, high creativity, and the ability to tap into superconsciousness or Akashic Records. On the other hand, when we listen to music they will pull down our emotional state and create confusion in our brain, the emotional body and ego being on overdrive. This is literally indulgence in the physical body. Now, we are talking about sounds and music that we can perceive, "invisible" sounds? Sounds that we can't hear doesn't mean that they don't exist, more powerful as they subliminally influence us.

The dolphins, keepers of the Divine Mother energy of the Earth, use a frequency with each other. The very sounds they emanate are healing, and have been shown to positively stimulate the neurons of unborn human babies. Pre-natal mothers can hear their babies.

experiments are reported that their children are highly intelligent, creative babies not exposed to the dolphins. Plus, the mothers had easier labour, birth in water.

And then there is the mystery of the missing keys, B# and E#, yet to be seen in picture them in 3D, they are "there". Also, sound is made up of length, width is "time" as 4D, sound is animated and you get music. Let's also look at rhythms _ -- -- _ -- _. You add an expression to a mountain of --yin or _y can have a weak fire on a strong mountain. This applies to music also, a hexagram of the I-Ching with either rhythm and the end will add that expression in unlimited rhythms cross-referenced with automated melodies in-sync with subject."

Anyhow, start listening to the birdsongs and birdspeak, and tell us what
