Thank you for the opportunity to share.

Who was created first the chicken or the egg?

"The problem of the origin of the universe is a bit like the old question: or the egg." - Stephen Hawkins

Philosophers and Scientists treat this question as a conundrum. The belief is a "straight line"; from a nebulous beginning to an uncertain future. This question considers time as being curved, a circle. Then, around this time line there is an egg and a chicken before a chicken. Time is cyclical and predestined. Parallel to a point of reference (Einstein). There is no creation, things are eternal. "Matter is not created nor destroyed, it only changes". This is called eternal.

We are souls having a bodily experience. We are in this physical body to experience. God is another soul. Souls are eternal. Just like matter they cannot be created or destroyed. There is a physical existence which science is aware of, however science goes beyond matter. Please reflect upon the above view (time cyclical, predestined) our scientists are finding. Once they found about quantum mechanics, they knew about the world.

God is the purifier. He reminds us who we really are. As Plato said: "we are immortal". This physical world is an eternal recurrence as Nietzsche, Heine and Poincaré.

Linear time and theories such as evolution, ID and creationists, cannot explain the paradox of the chicken and the egg. Cyclical time can do it, and the consequences behind cyclical time. Give it a thought.
