fixed it, since the core has also been hacked a few bit to add and
add tpl back again to the Xoopslists as should be....xhtml, html require h
and works with smarty as a template you know
) so why TPL as we are using as they are templates and so no headers n

so now all done....the Wiki tho to fix it takes the edit portion being throu
maybe requires a blank htm system dummy, which are all now tpl instead

since the wiki is now ok...as a subn as slow down a littel and check
one love people free

well weird when you check how the code is progressing already stripped
may do third and final..

. big warning e...is meant to be string! !! ! really...it
doesn't-and-will-not-except-spacing!!!!
it really slows things down, yet peoples use of it

Please pay attention and tell others and as soon as can will inform Smart
speed over last few weeks of learn where as also change and
adding it all together to o finalize am actualize our copy of Xoops for all

Anyways as you can see my writting is very compacted at the moment and
while me brain is at 1000 miles an hour peace people....
