The 'Double Slit Experiment' shows that particles, when pushed past some barrier, then produces waves, due to the release of the particles in pocket.

The Periodic table being made from matrices, proves that the constructs are mathematical at an atomic level, and then the Fibonacci sequence interwoven with a finger print, an ocean wave, and a galaxy spiral, shows that there is a common mathematical formulation of the universe's mathematical formulation.

When we realize there is more space in the atomic structure than there is in reality is something like a holographic projection from a central Source; a simulation, it is just very complex quantum code.
